

Technical Profile

GSA/GSI frame II

Magnet drive, end suction, centrifugal pumps
to ISO 2858 / DIN. EN 22858:1993 / ASMEB73.3

A versatile range of general service pumps designed to cover a wide duty and application base, using the minimum of pump models by maximising interchangeability of components. Available within the range is the GSA (ASME standard pump) and the GSI (ISO DIN standard pump). A GSL option is available for temperatures down to -100°C / -150°F .

The GSA (ASME) and GSI (ISO) product covers a hydraulic range that is split between three frame sizes, Frames 0, I, & II. The pumps are offered with a range of Synchronous Magnet Drives rated to match prime mover performance, hence specifications of all denominations can be catered for.

This range is based on sizes conforming to ASME & ISO performance and dimensional standards.

The standard materials of construction are Stainless Steel with silicon carbide internal bearings.

Design range limits

The GSA/GSI pump is designed to operate from -40°C up to 260°C , -40°F up to 500°F without the need for any ancillary cooling medium. Design working pressure is 18.9 bar, 275 psi.

Solids handling capability

The unit is capable of handling solids up to 5% w/w less than 150 microns.

Options

Materials of construction

Wetted parts	Alloy 20, Alloy C276
Internal bearings	SiC / Carbon
Gasket	PTFE

Other options

Casing drains flanged or screwed
Jacketed pump casing
Secondary Control
Coupling housing drain
Pressure upgrade to 25 bar, 360 psi
Large range of pump protection

Key Design Features

- **No seals:** To minimise maintenance, all of the associated costs and eliminate potential leaks.
- **Sealless design:** For total containment, essential for hazardous, aggressive or valuable product.
- **Interchangeability of components:** For maximum convenience and reduced stock holding, operator training etc.
- **High efficiency wet end:** To benefit maximum flow / head coverage.
- **Wide choice of materials:** To allow a choice of metallurgy to suit the applications requirements.
- **Casing gasket fully confined:** So eliminating risk of blowout.
- **Universal connection options:** So that suction and discharge flange connections can be configured to your exact requirements.
- **Modular rotating element cartridge:** Providing the most efficient way to perform replacements and manage your spare part inventory.

Benefits of GSA/GSI pump range

- Sealless design for total product containment.
- Ideal for hydrocarbon, toxic, aggressive, hot and valuable product.
- Conforms to ASME and ISO standards.
- Modular high efficiency wet ends.
- Designed to ensure maximum flow/head coverage across all ranges.
- Choice of various metallic materials of construction.
- One fully confined casing / containment shroud / shell joint.

Flanges and Connections

Casing

Suction and discharge flanges are designed in accordance with the following relevant standards:

ASME B16.5 Class 150

Machined with 1.5mm (0.06") high raised face having a continuous spiral groove.

DIN 2545 PN40

Machined with 2mm high raised face with a continuous spiral groove. (Note: these flanges are identical to BS4504 PN40).

Flange Loadings

Allowable flange loadings imposed by pipework are in accordance with Table 4 of API 685 2nd edition and exceed the values in ISO 5199 Annex C.

Drain Connections

The following drain options are available:

Standard: $\frac{3}{8}$ " BSP drain plug fitted with fully trapped gaskets.

Option 1: No drain, boss left undrilled.

Option 2: $\frac{1}{2}$ " NPT plug.

Option 3: $\frac{1}{2}$ " flanged drain rated to the casing flanges.

Gauge Connections:

Suction and discharge flanges are fitted with bosses for drilling/tapping: $\frac{1}{2}$ " NPT.

Option	-10°C to 260°C / 14°F to 500°F

For sub zero temperatures a suitable sealing compound (Loctite Multi Gasket or similar) is used to prevent the ingress of moisture into the coupling housing between the containment shroud/shell and motor adaptor assembly interface.
