

Maximise Uptime with Faster Repairs

HMD Kontro's innovative Insurance Kits are designed to support customers' needs in the event of an unplanned breakdown, minimising disruption and maximising your process uptime.

Based on HMD Kontro's extensive experience in magnet drive technology and the analysis of typical pump repair profiles, we have selected just those components that are most frequently in need of replacement.

Our Insurance Kit represents the quickest and highest value repair kit, with significant benefits compared to other repair options available:

Price: Significant saving against the value of a new pump unit - priced at a maximum 60% of a new pump price, and in many cases even less.

Value: More pumps becoming economically repairable.

Lead Times: Significantly less than complete pump cartridges.

Interchangeability: More common parts, and with options to improve standardisation.

Upgrades: The kit represents a simple upgrade path for users wishing to gain from the insurance benefits and the energy cost savings offered by HMD Kontro's ZeroLoss™ coupling.

To maximise your uptime, stock the HMD Kontro Insurance Kit. Please contact us for further information and to request a quotation.
